Optical Properties and Spectroscopy of Nanomaterials
Zhang's book entitled "Optical Properties and Spectroscopy of Nanomaterials" covers many traditional areas of chemistry, condensed matter physics, and material science. Zhang's presentation also combines phenomenological description and first principles of quantum mechanics. Examples are the Beer-Lambert law that we see in both analytical and physical chemistry texts, the dipole-allowed electronic state transitions (see, e.g. D.A. McQuarrie, "Statistical Mechanics"), infra-red and Raman ...
