

b. On the lunar photograph below use arrows and indicate four prominent features, two on each quarter phase of the moon. This is a view of the moon as would be seen outdoors without any viewing aids.

Lick Observatory

c. Using a lunar map with the features labeled determine the names of the features indicated by arrows on the above photograph. Indicate the two features that are prominently seen on the first and last quarter moons. Refer to question three for assistance.

First Quarter Last Quarter
 _____ _____

d. Often there is some confusion while observing the moon through a telescope and then trying to use a lunar map to determine the name of particular features. Below is a telescopic photograph of the moon. Based upon this information and the photograph of part b., how does this photograph differ from that of part b. which is a view seen without a telescope?

Lick Observatory

e. What is the phase of the moon in part d?

f. How did you determine the phase of the moon in part e?

6. Consider the motion of the moon and complete the following parts a - g of this question.

- a. What commonly used unit of time in everyday life has been derived from the motion of the moon?
- b. What period of the moon was used to obtain the above unit of time?
- c. If the moon requires 29 1/2 days to complete one revolution with respect to the sun, then approximately how many days does the moon spend in each phase?
- d. If the moon requires 29 1/2 days to complete one revolution with respect to the sun, then in what direction and how many degrees for each day does it change position with respect to the sun?
- e. If the moon is seen to rise at 5:00 p.m. tonight, then at what time would it rise tomorrow?
- f. Is the amount of change in position of the moon the same with respect to the stars?
- g. If a new moon occurs on January 5th at 2:00 a.m., then on what day and time will the next full moon occur?

7. The references to the moon which occur in literary works are sometimes more intent on the creation of an illusion by the author than being scientifically correct. Consider the following quote from Coleridge's "Rhyme of the Ancient Mariner":

*Till clomb above the Eastern bar,
the horned moon with one bright
star within the nether tip.*

Based upon the quote and the drawing beside the quote depicting what is described in the quote, complete the following parts a-c.

- a. What is the phase of the moon?
- b. What is the approximate time of observation?
- c. Is the observation as described reasonable? Explain.
