 3. Why did Mendel choose to use garden peas in his experiments? *He chose garden peas because they reproduce sexually.*
 4. Where are the male and female reproductive organs located in the garden pea flower? How did this help Mendel with his experiment? *They are located in the same flower and are tightly enclosed by the petals. This prevents pollen from other flowers from entering the pea flower. As a result, peas normally reproduce by self-pollination; that is, the male and female gametes come from the same plant.*
