Stingless bees (or meliponines) are a tropical group of social bees that are of economic importance in many of the areas of the world in which they occur. While they make honey like the honey bee, yield is far less per colony per year. They are also important pollinators of wild plants and crops such as macadamias and mangoes. The name for these bees is misleading as their "stingers" are highly reduced and non-functional. They are not found in the United States. The management and use of ...
