Principles of Electronic Communication Systems 4th edition provides the most up-to-date survey available for students taking a first course in electronic communications. Requiring only basic algebra and trigonometry, the new edition is notable for its readability, learning features and numerous full-color photos and illustrations.

Electronic Communications Principles And Systems

This book develops a solid understanding of the general principles that govern all communications systems. Topics include traditional analog communication techniques such as AM and FM, modern digital systems, radar, wireless, networking, consumer communications systems, and many other areas. Practical applications are stressed with an emphasis on signal processing at a systems level, in order to provide a better background for readers as technology advances and new integrated circuits become ...

4-1: Basic Principles 4 of Amplitude Modulation Modulator circuits cause carrier amplitude to be varied in accordance with modulating signals. Circuits produce AM, DSB, and SSB transmission methods. The basic equation for an AM signal is $v_{AM} = V_c \sin 2\pi f_c t + (V_m \sin 2\pi f_m t)(\sin 2\pi f_c t)$ The first term is the sine wave carrier
