Computational complexity theory focuses on classifying computational problems according to their resource usage, and relating these classes to each other. A computational problem is a task solved by a computer. A computation problem is solvable by mechanical application of mathematical steps, such as an algorithm.. A problem is regarded as inherently difficult if its solution requires ...

We delineate the complexity status of convex problems over network constraints, dual of flow constraints, dual of multi-commodity, constraints defined by a submodular rank function (a generalized allocation problem), tree networks, diagonal dominant matrices, and nonlinear knapsack problem's constraint. All these problems, except for the latter in integers, have polynomial time algorithms ...

Le véhicule électrique est actuellement au coeur des alternatives énergétiques qui permettent de faire face à la croissance du coût du carburant et au réchauffement climatique. En revanche, l'autonomie limitée des batteries des véhicules électriques et l'indisponibilité d'un nombre suffisant de bornes de recharge représentent des enjeux majeurs auxquels se trouvent ...

En optimisation mathématique, un problème d'optimisation linéaire demande de minimiser une fonction linéaire sur un polyèdre convexe.La fonction que l'on minimise ainsi que les contraintes sont décrites par des fonctions linéaires [1], d'où le nom donné à ces problèmes.L'optimisation linéaire (OL) est la discipline qui étudie ces problèmes.
