

2. A square hot tub has sides of length  $s$  feet. A tiler creates a border by placing 1-foot-square tiles along the edges of the tub and triangular tiles at the corners, as shown. The tiler makes the triangular tiles by cutting the square tiles in half along a diagonal.

Handwritten calculation: 
$$\begin{array}{r} 28 \\ + 2 \\ \hline 30 \text{ TILES} \end{array}$$

a. Suppose the hot tub has sides of length 7 feet. How many square tiles does the tiler need for the border?

b. Write an expression for the number of square tiles  $N$  needed to build this border for a square tub with sides of length  $s$  feet.  $4s + 2 = N$

c. Write a different but equivalent expression for the number of tiles  $N$ . Explain why your expressions for the number of border tiles are equivalent.

d. Is the relationship between the number of tiles and side length linear, exponential, quadratic, or none of these? Explain.

Equivalent representations continues to be a theme, but the need for equivalent symbolic expressions becomes more prominent in Frogs, Fleas and Painted Cubes and becomes the central focus in Say It With Symbols. Functions continued to be part of the exploration in this unit as most of the equivalent expressions students generate represent functions. In this unit all of the functions come into play and students have a chance to explore a set of problems in which they have to decide which ...
